

## Exploring the Boundaries of Formulaic Sequences

By Dutton, Kelly

Condition: New. Publisher/Verlag: VDM Verlag Dr. Müller | A Corpus-based Study of Lexical Substitution and Insertion in Contemporary British English | Formulaic Sequences are multi-word prefabricated phrases of either literal (e.g. good morning) or non-literal (e.g. kick the bucket) reading. A property of such sequences is variation. Formulaic sequences can be subject to varying degrees of lexical substitutions, grammatical variations, and insertions. This book investigates the boundaries of variation: the limits of lexical substitution and insertions for formulaic sequences, i.e. how much variation can occur before the sequence stops being fixed and becomes context-dependent. The boundaries between one formulaic sequence and another and the boundaries between a literal and non-literal reading are also explored. The Longman Idioms Dictionary (1998) and the British National Corpus (BNC) provided the data for the research, and the technique and analysis used contribute to lexicography and inform cognitive models of storing and organizing language. | Format: Paperback | Language/Sprache: english | 377 gr | 220x150x14 mm | 272 pp.
