### **Reviews**

*This publication is fantastic. We have read through and i am certain that i will planning to read yet again yet again down the road. You wont feel monotony at at any time of your respective time (that's what catalogs are for concerning when you request me).

Excerpt from **The Electron Theory of Magnetism** The theory, worked out, by Langevin for paramagnetic gases only, was later extended by Weiss to ferromagnetic substances. Weiss introduced a new notion into the theory of magnetism, viz., that of an intrinsic or molecular magnetic field by means of which he could account in a very beautiful way for the magnetic properties of the crystal pyrrhotite and many of the magnetic properties of iron, nickel, and cobalt. He has also contributed most essentially to our experimental knowledge of the ferromagnetic phenomena. One of the co-workers of Weiss in the fundamental investigations on pyrrhotite was J. Kunz, who also contributed to the theory of magnetism by determining the elementary magnetic moment and the charge of the electron from purely magnetic phenomena. In his lectures on the electron theory given at the University of Illinois, Kunz gave an account of the present theory of magnetism and of the experimental and theoretical work of Weiss. The author of this bulletin has used these lectures as a basis, drawing in addition, from the works of the various authors who have made further experimental advances.
