Not illustrated. 1913 Excerpt: .the water from the burette fills the glass capillary connecting tube. Now close the pinchcock Ci and shake the pipette lightly to give the gas the best sort of contact with the absorption reagent. After shaking for two or three minutes the gas should be drawn back into the burette by lowering the leveling tube until the solution from the pipette fills the connecting capillary tube when the pinchcock Ci.should be closed. The surfaces of the water in the leveling tube and in the burette should now be brought to the same level. The reading on the scale observed after draining the burette for two minutes as read at the bottom of meniscus should be recorded. The process must be repeated as in the operation of an apparatus for flue gas analysis until the reading is constant. In this way by the use of the proper pipettes all the constituents of the gas to be analyzed, with the exception of H₂ and CH₄, are determined. Explosion Tests. For determining hydrogen and marsh gas (CH₄) combustion tests are made in a pipette like Fig. 286 which is made particularly strong for exploding gases over mercury. In the upper portion of the pipette A there are two very fine platinum wires which are fused into the glass from opposite sides. When the spark from an induction coil is made to pass through the air gap between the two wires the explosive mixture contained is ignited. The explosion takes...
