This item is printed on demand - Print on Demand Neuware - This book is devoted to some topical problems and various applications of Operator Theory and to its interplay with many other fields of analysis as modern approximation theory, theory of dynamic systems, harmonic analysis and complex analysis. It consists of 20 carefully selected surveys and research-expository papers. Their scope gives a representative status report on the field drawing a picture of a rapidly developing domain of analysis. An abundance of references completes the picture. All papers included in the volume originate from lectures delivered at the 11th edition of the International Workshop on Operator Theory and its Applications (IWOTA-2000, June 13-16, Bordeaux). Some information about the conference, including the complete list of participants, can be found on forthcoming pages. The editors are indebted to A. Sudakov for helping them in polishing and assembling original TeX files. A. Borichev and N.
