Bulletin Volume 138-143

By United States. Bureau Of Mines

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 252 pages. Dimensions: 9.7in. x 7.4in. x 0.5in. This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1917 edition. Excerpt: . . . before a test is distributed along the entry on side shelves, on cross shelves about 8 inches beneath the roof, and Rice, G. S. , and others, First series of coal-dust explosion tests in the experimental mine, 1913, US pp. on the concrete floor, the usual distribution being at the rate of about 2 pounds of coal dust per linear foot of entry or 0. 5 ounce per cubic foot of space. For standard testing an explosion is initiated by firing a blown-out shot of 4 pounds of FFF black blasting powder from a cannon placed on the floor of the main entry and pointed outward. Plate IV, B, shows the cannon and the wiring ready for an explosion test. The upper wires from the bore hole are the shot-firing wires, and the wire passing across in front of the hole is part of...
