Forgotten Books, 2018. Hardback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from Critical Evaluation of Data in the Physical Sciences: A Status Report on the National Standard Reference Data System, June 1972 In 1970 the Research Committee on Industrial Wastes of the American Society of Mechanical Engineers wished to prepare a monograph on industrial incinerator design to upgrade existing design practices and produce more efficient, less polluting incinerators. They realized that thermodynamic data on the combustion process were needed The Chemical Thermodynamics Data Center, with its expertise and extensive files of data on thermodynamic processes, was in an ideal position to collect such data quickly and inexpensively. With support from the Society a compilation of heats of combustion of about 1000 substances commonly burned in industrial incinerators has been prepared. This compilation combined with information on how to use it for incinerator design will provide a basic handbook for engineers in the field. This handbook is expected to make an important contribution to the design of more efficient and reliable industrial incinerators. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.
