Guide to the study of insects and a treatise on those injurious and beneficial to crops for the use of colleges, farm-schools, and agriculturists

By Alpheus Spring Packard

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 236 pages. Dimensions: 9.7in. x 7.4in. x 0.5in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1872 Excerpt: . . . ocellated patch on the inner angle, which line is edged with a coppery tint. The moth lays its eggs on apple and pear trees early in summer in the blossomend of the fruit, and the larva hatches in a few days, burrowing into the core. It matures in three weeks, when the apple drops to the ground and the larva transforms in a thin cocoon in crevices in bark, etc. , and in a few days another brood of moths appear, though most of them remain in their cocoons through the winter as lame, where we have found them under the loosened bark early in May. This formidable pest may be partially destroyed by gathering wind-falls, though the larva often deserts the worm-eaten apple before it falls. The best remedy is that suggested by Dr. Trimble, who binds bands of hay about the trees from July...
