The variable Entities

By Adhikari, Roshan

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | Gravity Rules of Form | The book entitled 'The Variable Entities' is focused on the study of force and energy pronounced as entropy within the Planck's space as well as celestial boundary. A vector quantity as the force constituting a scalar type energy is by recent quantum theory research found to yield own visible spectra on both big and small scales. Small scale research of the virtual image for energy and force associated to a particular physical quantity can add to the drawing out of an inference about early sample for the further observational experiment at cosmic horizon. The technology is based on analysis of holographic image which forms on 2-D photographic plate for 3-D horizon and on 3-D photographic medium for 4-D horizon which both are possible by split of LASER cast by transparent mirror while axial rotation of gyroscopic wheel at right angle happens with a strong beam. A virtual image appears with the real also but the former is the main point in study because is result of information as a kind of entropy which may imply learning tools of sub-atomic structure, impact, then afterward emergence of universal parts...
