Forgotten Books, 2017. Hardback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from An Integer Programming Procedure for Assembly System Design Problems With recent advances in manufacturing and computer technology, the notion of the automated factory has evolved from a science fiction fantasy to a reality. Some recent references in the popular press which describe these advances are Bylinsky Donlan Friedrich, et al. U.s. News and World Report Nicholson, et al. Business Week Schefter As these articles indicate, a wide variety of auto mated equipment for part fabrication, assembly, and material handling is now available for manufacturing and assembly systems. For instance, robots are being widely used in welding, spray - painting, and material-handling applica tions, while other types of automation such as numerically-controlled machining centers are performing part fabrication. In addition, robots are expected to work along side assembly workers in many future assembly systems. These technological advances have created a new set of opportunities for management scientists, with regard to both the design and the operational control of automated systems. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.
