Menabrea remarks that if we take f e t, and choose our origin and direction of axes so that 2es 0, 2c6 0, 2c 0, 26c0, 2c 0, 2iA 0, we obtain the elegant forms for P, Q, R first given by Dorna in a memoir of 1857; see our Art. 599. Here t for any link equals the Ejilm) of our notation. For earlier researches in this same direction Menabrea refers to Vene, Pagani and Mossotti besides Dorna. The memoirs of Vene and Pagani are those probably which we have cited in the footnote to our p. 411, while the reference to Mossotti is possibly to his Meccanica rationale. Menabrea concludes by referring to a memoir he is about to publish, dealing more fully with the whole subject. I do not think he published this, or returned to the matter till a memoir of 1869. 607.
