## REVIEW OF NEW SOURCE PERFORMANCE STANDARDS FOR COAL-FIRED UTILITY BOILERS VOLUME 1

To get **Review of new source performance standards for coal-fired utility boilers Volume 1** eBook, you should refer to the link below and download the file or have access to additional information which are related to REVIEW OF NEW SOURCE PERFORMANCE STANDARDS FOR COAL-FIRED UTILITY BOILERS VOLUME 1 book.

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 44 pages. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1978 Excerpt: . . . long-term), and fuel inventory charge. It was not possible to determine with any degree of certainty whether the busbar power cost differentials noted in Table 4. 1 could be attributable to differences in assumptions as to the future prices of coal and transport. The NERA study was reasonably detailed insofar as it identified sources of coal, accordingly to Bureau of Mines regions, and assumed cost escalation factors were stated unambiguously. A least-cost optimization model was said to have been used to determine coal flows. The EPRI and Komanoff studies lacked equivalent documentation. Other studies or models of coal flows, ones with which NERAs results might conceivably be contrasted, were not considered for this analysis. 4. 2J Capital Costs The economic factor most often mentioned as the major nuclear parameter is its capital cost. Building a kilowatt of nuclear capacity is estimated to cost from 15 to 30 percent more than building a kilowatt of coal-fired capacity. In the three studies compared in Table 4. 1, it was estimated by Komanoff that a kilowatt of nuclear capacity would cost 26 percent more, by NERA, 24 percent more, and EPRI, 17 percent more. These are national averages; there is very little regional variation in these relationships. In considering capital cost estimates, it is important to note not only the relationships between nuclear and coal investment figures but also the magnitude of these estimates. In this regard, Komanoffs national average for nuclear, l, 200kw (1985 dollars, 1150 Mw), is 14 percent higher than the...
