OVERVIEW OF THE PROJECT In this report a systematic procedure is given for solving the QPP problem when the induced norm is the Loo-norm. In particular, a Lute type system is considered with the input and output spheres measured with re-spect to the Loo-norm, and an algorithm is developed on the basis of mAnimizing the Hoo-norm of a linear closed-loop operator for solving the QPP problem. Relevant design criteria are derived by first embedding the problem in the L2 function space, leading to an Hoo-minimization problem which is followed by an exponential weighting technique for estimating the tracking error bounds in terms of Loo-norms. The approach to this prob-lem is based on fixed-point techniques, the multivariable circle criterion, and Hoo-optimal control. The controller gains satisfying the design criteria and the QPP are obtained by solving a Riccati equation and a Lyapunov...
