Excerpt from The Living Organism: An Introduction to the Problems of Biology Among the many branches of that organised pursuit of knowledge which has attained in this age its most marked development, there is none which has so profoundly influenced current thought as Biology. The conceptions derived from biological research have proved not only an intellectual gain of remarkable value in their proper sphere; but they have had, so dominant are they in character, far-reaching results in other directions. The great tide of new ideas has been too strong to be contained within its own channel. The neighbouring fields of philosophy have been affected. The human outlook on Nature has been changed. But just as new ideas colour those which have been previously acquired, so does the loss of a single conception involve the disturbance of many.
