

Machian Relativity: The New Theory That No Scientist Can Disprove (Paperback)

By G. O. Phillips

Createspace, United States, 2012. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****.The Twins Paradox - Case Closed. This book builds a compelling case against Einstein's Theory of Special Relativity. The reciprocal aspect of the theory has never been experimentally demonstrated and asymmetries in experiments with atomic clocks prove that time dilation is occurring asymmetrically relative to a frame external to the earth's motion. This is supported by phenomena such as stellar parallax and aberration, Doppler asymmetries in the Cosmic Background Radiation, and Binary Star observations. These show that the motion of light is also relative to a Universal frame external to the earth's motion. The author shows these relativistic effects are determined by motion relative to the average momentum of all matter in the universe, according to Mach's Principle. He has reinterpreted the covariant equations of Special Relativity to be consistent with this, and has applied his theory to other phenomena. This includes speed of light invariance, relativistic mass, $E = mc^2$, electrodynamics, Minkowski diagrams, relativistic four-vectors, relativistic simultaneity in rotating systems and the simplest possible solution to the Twins Paradox.

Reviews

This book may be really worth a read through, and far better than other. it was actually writtern extremely completely and valuable. I am just very easily will get a satisfaction of looking at a published ebook.

-- Lillie Toy

It is easy in read through easier to fully grasp. it had been writtern very completely and useful. I am pleased to let you know that here is the greatest book we have read during my personal life and could be he very best book for possibly.
