American Mathematical Society, United States, 2002. Paperback. Condition: New. Language: English . Brand New Book. Mathematicians like to point out that mathematics is universal. In spite of this, most people continue to view it as either mundane (balancing a checkbook) or mysterious (cryptography). This fifth volume of the What s Happening series contradicts that view by showing that mathematics is indeed found everywhere - in science, art, history, and our everyday lives. Here is some of what you ll find in this volume: Mathematics and Science: Mathematical biology - Mathematics was key to cracking the genetic code. Now, new mathematics is needed to understand the three-dimensional structure of the proteins produced from that code; Celestial mechanics and cosmology - New methods have revealed a multitude of solutions to the three-body problem. And other new work may answer one of cosmology s most fundamental questions: What is the size and shape of the universe? Mathematics and Everyday Life: Traffic jams - New models are helping researchers understand where traffic jams come from-and maybe what to do about them; Small worlds - Researchers have found a short distance from theory to applications in the study of small world networks. Elegance in Mathematics: Beyond Fermat s Last Theorem - Number theorists are reaching higher ground after Wiles astounding 1994 proof: new developments in the elegant world of elliptic curves and modular functions; The Millennium Prize Problems - The Clay Mathematics Institute has offered a million dollars for solutions to seven important and difficult unsolved problems. These are just some of the topics of current interest that are covered in this latest volume of What s Happening in the Mathematical Sciences . The book has broad appeal for a wide spectrum of mathematicians and scientists, from high school students through advanced-level graduates and researchers.
