

Wireless Channel Modelling for Indoor Populated Environments

Filesize: 1.2 MB

Reviews

This sort of publication is everything and made me seeking forward and much more. Better then never, though i am quite late in start reading this one. I am easily could possibly get a delight of reading through a created pdf.

WIRELESS CHANNEL MODELLING FOR INDOOR POPULATED ENVIRONMENTS

To get **Wireless Channel Modelling for Indoor Populated Environments** eBook, you should refer to the link below and download the file or have access to additional information which are related to WIRELESS CHANNEL MODELLING FOR INDOOR POPULATED ENVIRONMENTS book.

VDM Verlag. Paperback. Condition: New. 144 pages. Dimensions: 8.7in. x 5.9in. x 0.3in. The recent development of indoor wireless local area network (WLAN) standards at 2.45 GHz and 5 GHz has led to increased interest in propagation studies at these frequency bands. Within the indoor environment, human body effects can strongly reduce the quality of wireless communication systems. Human body effects can cause temporal variations and shadowing due to pedestrian movement and antenna-body interaction with portable terminals. This book presents a statistical characterisation, based on measurements, of human body effects on indoor narrowband channels at 2.45 GHz and at 5.2 GHz. A novel cumulative distribution function (CDF) that models the 5 GHz narrowband channel in populated indoor environments is proposed. This novel CDF describes the received envelope in terms of pedestrian traffic. In addition, a novel channel model for the populated indoor environment is proposed for the Multiple-Input Multiple-Output (MIMO) narrowband channel in presence of pedestrians at 2.45 GHz. Results suggest that practical MIMO systems must be sufficiently adaptive if they are to benefit from the capacity enhancement caused by pedestrian movement. This item ships from multiple locations. Your book may arrive from Roseburg, OR, La Vergne, TN. Paperback.
