University Press of Kansas, United States, 1985. Paperback. Condition: New. Language: English . Brand New Book. This collection of essays brings together six distinguished scholars to examine the progress, problems, and potential of material culture studies in America. From the perspective of their respective disciplines--cultural geography, vernacular architecture, American studies, the history of technology, the decorative arts, and folklife studies--these widely respected authorities survey the major material culture research of the past two decades and assess the most creative and innovative work-in-progress. Thomas J. Schlereth s introductory chapter provides a critical analysis of material culture evidence, articulating the distinctive quality of such data and focusing on the problematic nature of doing research with objects rather than with written records. The chapters that follow, five of which originally appeared in 1983 in a special issue of American Quarterly, represent a succinct summary of those fields and subfields of material culture scholarship that are at the cutting edge of current research. The volume includes an expanded, up-to-date bibliography that will be of use to a wide range of scholars. Today American material culture studies remains a field where the most innovative work is occurring at the local or regional level. The essays in this volume suggest, however, that such work will be part of the wider evidential base and broader interpretive strategy out of which a new synthesis may develop.
