Reviews

This pdf might be well worth a study, and a lot better than other. It really is simplistic but excitement inside the fifty percent in the book. Its been printed in an exceedingly straightforward way which is just after i finished reading this ebook through which really modified me, modify the way i believe.

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | FOR TUNING THE CRYSTAL MORPHOLOGY OF CARBOXYLIC ACIDS | The control of crystal morphology in industrial crystallization is critical because it significantly affects the efficiency of downstream processing (filtering, washing, and drying) and postprocessing physicochemical properties (bulk density, wettability, and tableting behavior). In the case of pharmaceuticals, crystal morphology affects drug bioavailability and thus its therapeutic efficacy. Factors such as cooling rate, degree of supersaturation, agitation speed, agitation time, presence of seed crystals, and impurities have been routinely used to engineer crystal morphology. The first task was to derive quantitative solvent indices for tuning the crystal morphology. This was achieved by conducting series of systematic and comprehensive cooling-crystallization experiments. The roles of inter- and intra- molecular hydrogen bonding, steric hindrance resulting from solvent functional group position, and aromatic pi-intermolecular interactions, in determining the final crystal form were examined. Several organic solids, including pharmaceutical compounds such as ibuprofen and aspirin, were crystallized from solvents with widely varying polarities. | Format: Paperback | Language/Sprache: english | 104 pp.
