Excerpt: . . . from *P. fontana* chiefly by the rudimentary cilia of the inner peristome and by the erect lanceolate acute perigonal leaves with the costa percurrent in inner leaves. The inner perichaetial leaves are said to be shorter than the outer, and Sullivant says the leaves lack the plicae of *P. fontana*. *BARTRAMIA* Hedw. The *Bartramias* grow in moist niches in cliffs and on moist shady banks, looking much like tufts of green wool. Their capsules are globular and somewhat unsymmetric when moist, but dry with regular folds and alternate ridges. When very dry the body of the capsule becomes so shrunken as to be smaller than the mouth of the capsule itself. The leaves are long and slender and somewhat curled when dry, and strongly papillose. *B. Cederi* is somewhat of an exception as regards leaf characters, and by recent writers is put in the...

Reviews

This book is definitely not simple to begin on studying but quite fun to see. I actually have read and that i am sure that i will gonna read through yet again once again in the foreseeable future. It is extremely difficult to leave it before concluding, once you begin to read the book.
