COMPARING RECOVERY PROFILE WITH DIFFERENT DOSES OF KETAMINE & PROPOFOL

Comparing Recovery Profile
with different doses of
Ketamine & Propofol
A Project Report

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | A Project Report | Laparoscopic tubal ligation is most widely used and trusted method for female sterilization done on day care basis. Various anaesthetic techniques have been used to ensure rapid recovery and home readiness. Ketamine, a dissociative anaesthetic agent produces sedation, amnesia and profound analgesia. Its use in day care surgery has been limited because of the potential postoperative psychotomimetic side effects (illusions, disturbing dreams, delirium), increased arterial blood pressure, heart...
