William Andrew Publishing, United States, 2014. Hardback. Book Condition: New. 249 x 190 mm. Language: English . Brand New Book. High-precision cleaning is required across a wide range of sectors, including aerospace, defense, medical device manufacturing, pharmaceutical processing, semiconductor/electronics, etc. Cleaning parts and surfaces with solvents is simple, effective and low-cost. Although health and safety and environmental concerns come into play with the use of solvents, this book explores how safe and compliant solvent-based cleaning techniques can be implemented. A key to this is the selection of the right solvent. The author also examines a range of newer green solvent cleaning options. This book supplies scientific fundamentals and practical guidance supported by real-world examples. Durkee explains the three principal methods of solvent selection: matching of solubility parameters, reduction of potential for smog formation, and matching of physical properties. He also provides guidance on the safe use of aerosols, wipe-cleaning techniques, solvent stabilization, economics, and many other topics. A compendium of blend rules is included, covering the physical, chemical, and environmental properties of solvents. * Three methods explained in detail for substitution of suitable solvents for those unsuitable for any reason: toxic solvents don t have to be tolerated; this volume explains how to do better* Enables users to make informed judgments about their selection of cleaning solvents for specific applications, including solvent replacement decisions* Explains how to plan and implement solvent cleaning systems that are effective, economical and compliant with regulations.
