

Interface-Phenomena in 3C-SiC Heteroepitaxy on Silicon

Filesize: 4.76 MB

Reviews

A whole new eBook with an all new standpoint. It is actually rally fascinating throgh reading through time period. You wont truly feel monotony at anytime of your own time (that's what catalogues are for relating to when you request me).

(Claire Bartell)

INTERFACE-PHENOMENA IN 3C-SiC HETEROEPITAXY ON SILICON

Shaker Verlag Aug 2011, 2011. Taschenbuch. Book Condition: Neu. 208x146x12 mm. Neuware - Silicon carbide as a wide bandgap semiconductor material is by now widely introduced in the power device market. Its superior performance in terms of power density, high switching frequency and breakdown voltage leads to an advantage in efficiency and in the power to weight ratio of modules compared to silicon. All the devices on the market until now rely on the use of hexagonal polytypes. These show the highest bandgap and can be produced in high quality for the high-volume market by physical vapor transport technology. The only cubic polytype 3C cannot be used for high quality devices as the production is very difficult and the available material is still very defect rich. On the other hand this polytype has special properties concerning isotropic values (e.g. mobility) and the possibility to form a rather good interface to oxides as required for MOS devices. Nowadays, there are two main technologies used for the production of cubic silicon carbide. Both rely on the heteroepitaxial growth of 3C thin films on either hexagonal silicon carbide or on silicon substrates. The growth on hexagonal substrates provides a better quality but silicon substrates are more cost effective and by that more often used. To make the layers grown on silicon substrates by chemical vapor deposition more suitable for device applications a huge effort has to be raised to improve their crystalline quality regarding domain size and defect density as well as concerning stress in the layer. Within this work several steps during substrate preparation, seeding and the beginning of epitaxial growth and their influence on layer quality had been under research: In chapter 4.1 the substrate preparation was investigated. A particular interest was paid to the chemical cleaning and etching in hot...
