By G. C. McMURTB, A. R. S. M. , A. R. C. Sc. The presence of small amounts of impurities in copper has often a marked effect on the character of the metal, rendering it more suitable for some purposes than for others. In the metallurgy of iron and steel the influence of these small amounts of other elements is well known, and their presence or absence entirely alters the character of the product produced. But with copper very much remains to be done in the direction of ascertaining the action of these impurities. The cause of...
