

Bottom-Up Multifunctional Nanocomposites : Self-Assembly with Sol-Gel Chemistry for Nano -Electronic, Magnetic, Magnetolectric and Photonic Applications

By Shenqiang Ren

VDM Verlag Dez 2009, 2009. Taschenbuch. Condition: Neu. This item is printed on demand - Print on Demand Neuware - Multifunctional materials combine multiple functions including electronic, magnetic, mechanical, photonic and biological functions. They are capable of exhibiting various controllable and predictable physical responses when subjected to diverse external conditions. Multifunctional composites have drawn much attention since they show new classes of physical properties. These new classes of physical properties are characterized by a secondary coupling of individual physical properties of each component of a composite system. Solution-based self-assembly bottom up paradigm is a promising route toward nanoscale multifunctional materials synthesis. In this book, a method that combines sol-gel chemistry with self-assembly and phase separation to produce multifunctional thin film nanostructures or bi-crystals with a tailored morphology will be introduced. 100 pp. Englisch.

Reviews

An extremely wonderful book with lucid and perfect information. It is one of the most awesome publication i have read. Your life period will probably be enhance the instant you total looking at this pdf.

-- Prof. Dan Windler MD

It is really an amazing publication i actually have at any time read. It is really simplistic but unexpected situations inside the 50 percent of your pdf. Its been written in an exceptionally simple way in fact it is just right after i finished reading this ebook where actually transformed me, alter the way i really believe.

-- Dr. Celestino Spinka III
