Solvatochromism, Molecular Ionic Recognition: Photophysical Aspect

By Tandrima Chaudhuri

LAP Lambert Academic Publishing. Paperback. Condition: New. 140 pages. Dimensions: 8.6in. x 5.9in. x 0.3in. This book deals with a systematic study of (i) Solvation effect in neat solvents, (ii) Supramolecular interaction with fullerenes and (iii) EDA interaction with metal ions involving four different classes of fluorescent probes viz. , saturated b-diketones (dk) dye I, boron diketonate complexes (bf) dye II, pyrromethene laser dyes (PM) dye III and meso-tetraphenylporphyrins (TP) dye IV. Density based theoretical (DFT) calculations of some photophysical parameters for the dye systems were attempted for providing justification in support of hostguest or donoracceptor type of interaction and the corresponding energies have been calculated, together with molecular orbital and electron density mappings to locate the probable sites of interaction. The rationale behind undertaking the work has been to explore the role of fluorescence probes in terms of the three above mentioned ways of weak interaction. This item ships from multiple locations. Your book may arrive from Roseburg,OR, La Vergne,TN. Paperback.

Reviews

Extremely helpful for all class of people. We have read through and that i am confident that i am going to going to read through again again down the road. Its been designed in an exceedingly basic way in fact it is simply following i finished reading this pdf in which in fact altered me, alter the way i think.

-- Noel Stanton

Absolutely one of the best pdf We have ever read. I really could comprehended every little thing using this written e book. I am easily could get a satisfaction of reading a written publication.

-- Dr. Odie Hamill
