

Proceedings of the XV Symposium Neuroradiologicum

Filesize: 1.19 MB

Reviews

It is one of the best books. Indeed, it really is a play, nevertheless an amazing and interesting literature. It is extremely difficult to leave it before concluding, once you begin to read the book.

(Sofia Yundt)

PROCEEDINGS OF THE XV SYMPOSIUM NEURORADIOLOGICUM

Condition: New. Publisher/Verlag: Springer, Berlin | Kumamoto, 25 September 1 October 1994 | Since 1939, the Symposium Neuroradiologicum has been held every 4 years in various cities throughout the world. Great neuroradiologists such as Taveras, Du Boulay, Greitz, Lindgren, and DiChiro have been among the presidents of the previous symposia. The XV Symposium Neuroradiologicum was held in Kumamoto from 25 September through 1 October 1994. More than 1,200 participants gathered to discuss the most recent developments, including interventional neuroradiology, functional imaging, MRI contrast media, new techniques in MRI, iodinated contrast media and other advances. The communications are presented in this book. Special lectures held by Drs. Dillon, Harwood-Nash, and Picard are included. This book covers the most recent advances in neuroradiology. | New Horizons Special Lecture I.- Neuroradiology: its present science - its future challenges.- Diffusion-weighted MRI and perfusion echo-planar imaging in a rat stroke model.- Comparison of conventional T2-weighted and diffusion-weighted MRI in identification of cystic lesion in the cerebrospinal fluid space.- Kinetic studies with echo-planar imaging.- Cystic brain masses: use of variable-bandwidth steady-state free-precession MRI.- Restricted arterial expansion as a universal causative factor in communicating hydrocephalus.- Brain plasticity in patients with central tumours: functional MRI and intraoperative electrophysiological mapping.- Functional mapping of sensorimotor cortex with combined use of magnetoencephalography, functional MRI, and motor-evoked potentials.- Functional MRI of human motor cortex using a conventional MRI system.- Inflow effect in functional MRI using gradient-echo at 1.5 T.- MRI of olfactory structures: normal subjects and patients with olfactory dysfunction.- Functional MRI of olfaction in normals and patients.- Functional MRI of memory in transient global amnesia.- Clinical application of relative quantification in single-Voxel 1H-MRS for brain examination.- Standard terminology for MR image description.- Algorithm for automatic matching of brain stem atlas to MR images.- MR Angiography: comparison of time-of-flight, phase-contrast and digital...
