Henry Holt & Company, 1999. Book Condition: New. Brand New, Unread Copy in Perfect Condition. A+ Customer Service! Summary: From the leaves at the top of the canopy to the insects living deep beneath the soil, a forest is a complete, unified ecosystem. Each event, from the growth of a single sapling to a cataclysmic fire, is critical to the life of the forest as organism. Veteran science writer Luoma here chronicles the work of a unique and fascinating scientific research project that, over the course of several decades, will bring together scientists from almost every discipline -- botanists, entomologists, wildlife ecologists, soil biologists, etc. -- to piece together the long-term natural history of a single forest ecosystem, in this case a majestic old-growth forest of the Pacific Northwest. What emerges is a wealth of information that even now is pointing the way to a new approach to forest management, one that will allow for the cutting of trees for timber, while preserving the beauty and integrity of these proud woods.
