D. Degree Formal functional relations are derived for the charge and current densities of macroscopic systems acted upon by electromagnetic fields. Quantum field theoretical techniques are combined with the results of equilibrium statistical mechanics for a many-body theory of the electromagnetic properties of a uniformly magnetized electron gas in the non-relativistic limit. The functional relations for charge and current density are utilized for the case of an additional electromagnetic disturbance acting upon the electron gas. The results comprise a theory of charge transport and electromagnetic fluctuations for the electron gas. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy.
