*It is great and fantastic. I actually have read and so i am certain that i am going to go through once again yet again in the future. I realized this ebook from my dad and i encouraged this book to find out.*

Excerpt from Solution of a Non-Linear Integral Equation Appearing in the Theory of an Aerosol: A Memorandum Submitted by the Applied Mathematics Group, New York University to the Applied Mathematics Panel, National Defense Research Committee An aerosol is a suspension of liquid particles in air, such as vapor or smoke. By mutual collisions, particles will coagulate; by gravity, particles will settle on the ground and disappear from the aerosol. The problem is to determine the number  $n(r, t)$  of particles of radius  $R$  at any time  $T$ , provided that the probability of collision and that of settling are known and that the number  $N$  of particles of radius  $R$  at the time  $T = 0$  is given as a function of  $R$ .
