Reviews

Complete guide! Its this kind of very good read through. This is certainly for all who statte there was not a worthy of looking at. I am just quickly will get a delight of looking at a composed publication.
(Kacie Carroll)

SECOND-YEAR MATHEMATICS FOR SECONDARY SCHOOLS VOLUME 2

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 50 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1910 Excerpt: . . . circles, two central angles have the same ratio as the arcs intercepted by their sides. Let $\angle ABC$ (Fig. 155) be any central angle. By the preceding theorem it may be compared with the perigon $\angle ABA$. $\angle ABC$ arc AC Then $\angle ABA$ arc TMA . Why Expressing $\angle ABA$ and arc AMA by the number of units (degrees of angle and degrees of arc) they contain, respectively, we have $\angle ABC$ arc AC $360/360$. Multiplying through by 360, $\angle ABC$ arc AC , in the sense that the number of angle degrees in $\angle ABC$ is the same as the number of arc degrees in the arc AC . As $\angle ABC$ is any central angle, the number of degrees in any central angle is the same as the number of degrees in the arc intercepted by its sides. This is more technically stated thus: Proposition II 159. Theorem: A central angle is measured by the arc intercepted by its sides. Exercises 160. Solve the following exercises: 1. By Proposition II, using rule and compasses only, divide a circle (a) into 4 equal arcs; (b) into 2 equal arcs. 2. Divide a circle into three arcs in the ratio of 1: 2: 3. 3. Find an arc of 450; 750; 1050; 1650; 150. 4. If a circle is divided into 4 arcs in the ratio of 1: 4: 6: 7 what is the number of degrees in each arc 5. The area of a circle is 616 sq....
