RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 606 pages. Dimensions: 9.7in. x 7.4in. x 1.2in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1906 Excerpt: . . . of slate lies between California and Don rivers. West of the limestone is an area of sedimentary rocks varying from graphitic slate to finegrained false-bedded quartzite. In places, particularly north of Potato Mountain, the rock has been jointed into pencil-shaped rhombohedral fragments. Its age is unknown, and so far it has not been definitely correlated with the patches of slate to the east. This slate extends from the Kanauguk to a point about 5 miles east of Tin City, where it is succeeded by a limestone of Carboniferous age, apparently overlying the slate. IGNEOUS ROCKS. Cape Mountain is a mass of coarse gray porphyritic granite thrust through the limestone, and into the latter acidic dikes and sills have been intruded in all directions. There are also later basic dikes cutting both limestone and granite. The upper 400 to 4. 50 feet of the mountain are composed of a dark, line-grained quartz-sericite schist, whose bedding seems to be about flat. Between the schist and the granite is a bed of limestone 10 to 12 feet thick. On the north of Potato Mountain there are a number of granite dikes with others of a somewhat more basic character. At Brooks Mountain, Ears Mountain, and Tin Creek are large intrusions of granite, while granitic dikes cut across Lost River valley at many places and are also found on King River and in the slate area between Don and California rivers. Greenstone dikes, probably altered diorites or still more basic...
