

Bad Harvest?: The Timber Trade and the Degradation of the World's Forests

By Nigel Dudley, Jean-Paul Jeanrenaud & Francis Sullivan

Earthscan, London, 1996. Paperback. Condition: New. Reprint. The single most important influence on the world's forests - temperate, boreal and tropical - is the timber trade. This book analyzes the environmental effects the trade is having, and proposes policies to limit or reverse the damage. It looks not only at the social and environmental consequences for the forests themselves, but also at the effects of the ways in which timber is farmed and the effects of the timber processing industries. Ideally, the timber trade and environmentalists could be working towards a common goal, and this book makes a vital case relevant to both parties. Size: 8vo - over 7¾" - 9¾" tall.

Reviews

An exceptional pdf and also the typeface applied was intriguing to read through. It is definitely simplified but excitement in the 50 % in the ebook. I discovered this ebook from my dad and i recommended this pdf to find out.

-- Jarod Ward

Complete information for publication enthusiasts. It is really basic but shocks inside the fifty percent of your book. I am just delighted to let you know that this is basically the finest book i have read through in my individual lifestyle and might be he best pdf for actually.
