*A whole new eBook with a brand new point of view. It is definitely simplistic but shocks in the 50 percent of the publication. I am just pleased to explain how this is the greatest eBook i have read during my very own daily life and could be he best eBook for possibly.*

For another example, suppose the log to be 4.4976414. We find that this log lies between those for 31,451 and 31,452 and that the difference between log 31,451 and the given log is 6414-6345=69 Now in the table headed 139 in the column P.P. of proportional parts, find that 5 gives a difference of 69; therefore the corresponding number to log 4.4976414 is 31,451.5. Suppose we are given the log 4.4956443. The nearest log to this one is 4.4956415, to which corresponds the number 31,307. The difference between it and the next greater log 4.4956553, is 6553-6415 = 138 while the difference between it and the given log is 6443-6415 = 28 The figures following the first five places are found from the table of proportional parts, headed 138. Take from it the next figure 2, corresponding to 27.6, which is next inferior to 28; subtracting 27.6 from 28 gives 0.4. Take this 10 times, which gives 4, which corresponds to 0; taking it 100-fold, which is 40, which is opposite to the next inferior number, which is also 27.6 and being opposite 2, this number (2) becomes the eighth figure of the number. Now the difference between 40 and 27.6, which is 12.4, is increased tenfold, giving 124 which, being opposite 9 shows that 9 is the last figure of the number, 313,072, 029. Since the log has an index or characteristic of 4, the decimal point (see...
