Reviews

A high quality pdf as well as the typeface applied was exciting to see. It really is written in simple words and phrases rather than difficult to understand. You will not really feel monotony at any time of your time (that's what catalogs are for relating to in the event you question me).

Excerpt from **Factors Affecting the Usefulness of Honeybees in Pollination** A knowledge Of the structure of the blossoms is necessary to an understanding of the changes that may occur in the nectar, for if the nectar is exposed to dry air the water evaporates, leaving a higher percentage of sugars. If there is a wind, the rate of evaporation is increased. Furthermore, as the relative humidity of the atmosphere decreases, the sugar concentration of the nectar increases. On a clear day the relative humidity frequently drops from near 100 percent in early morning to less than-50 percent at noon. It was found, in an experiment under controlled conditions, that when the relative humidity was 100 percent the sugar concentration of poinsettia nectar was percent, but when the humidity had been 70 percent for several hours the concentration had increased to percent.
