

The Geology of New Zealand; In Explanation of the Geographical and Topographical Atlas of New Zealand, from the Scientific Publications of the Novara

By Ferdinand Von Hochstetter

Theclassics.Us, United States, 2013. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1864 edition. Excerpt: .of Aphanite, Nephrite flintstone, c. (?.) Human bones, bones of dogs, whales, fishes, and different birds--Penguin, Albatross, Weka (Ocydromus), Kiwi (Apterix), Moa bones, and egg shells, in the neighbourhood of the Maori fire-places. These bones are mostly burned, and bear the marks of stone weapons. VOLCANIC FOEMATION. 1. The north side of the Manukau Harbour is formed of a rugged rocky coast wall composed of mighty layers of volcanic stone masses, consisting of angular fragments of the different volcanic basis of rocks--Trachy-Dolerite, Andesite, c, which are transformed landwards into different coloured conglomerate clays. 2. On the southern side of the Manukau Harbour, and on both sides of the Waikato, thence to the Aotea Harbour, extensive strata of basaltic conglomerate cover the tertiary layers, and with these conglomerates are immediately connected masses of eruptive basalt, without forming distinct craters. 3. The volcanic zone which encloses...
