That gravity constant commonly is applied on all masses of the universe. However, the calculation only matches if additional 95 masses are added by fictive Dark Matter and Energy. Already at geostationary satellites, the calculation wont fit: the earth is able to force satellites into circle track at height of about 42000 km if they are moving by 3 kms. In reality however, they fly ten times faster through the space and thus show hundredfold stronger inertia. Also the sun can not keep these satellites on the demanded track, because their velocity varies by - 10 every day. Above this, its unsolved why satellites for earth observation stagger around the earth at S-shaped tracks and why satellites at polar orbit are eastward drifting continuously. A second problem results of the idea, at the one hand would exist the material and at the other hand the vacuum. Each material particle would dissolve immediately into the surrounding absolute void. Its not conceivable how previous gravity could affect attracting forces through the nothing of space....
