RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 68 pages. Original publisher: Cincinnati, OH : U. S. Environmental Protection Agency, Office of Research and Development, National Exposure Research Laboratory, 2007 OCLC Number: (OCoLC)550539485 Subject: Red shiner -- Coosa River (Ga. and Ala.). Excerpt: . . . 13 (iv) F1 hybrids for values 0. 40-0. 6; (v) backcrosses to blacktail shiner (H) for values bt 0. 11-0. 25; and (vi) blacktail shiner for values 0-0. 10. Integrative characterization of specimens Summary determinations of mixed ancestry for individuals 30mm SL reflected incongruency or intermediacy of an individuals morphology, mtDNA haplotype and microsatellite genotype. Characterization of individuals 30mm SL was restricted to comparison of mtDNA haplotype and nuclear genotype. Comparison of phenotypic variation to mtDNA haplotype and nuclear genotype enabled us to differentiate 14 hybrid categories from red to blacktail shiner (e. g. , Costedoat et al. 2007). For example, individuals were classified as hybrid if they exhibited blacktail shiner morphology and multi-locus microsatellite genotype, but expressed a red shiner mtDNA haplotype. Similarly, hybrid classification extended to individuals with a hybrid phenotype, but with blacktail mtDNA profile and microsatellite genotype. Hybrids were categorized as either putative F hybrids, or later generation hybrids with asymmetry favoring red shiner (i. e. , 1 red shiner backcross) or blacktail shiner traits. Environmental Characterization Water Quality and Geomorphology: Environmental variables and summary values are provided in Table 1. Baseflow turbidity was measured on three occasions using a hand held turbidity meter (Hach 2100P). Baseflow conditions were met if no rain was observed in the region for the preceding 72 hours and if USGS gauges on nearby streams indicated stable, low flow. Turbidity measurements were made at least two...
