Information Technology: FDA Needs to Fully Implement Key Management Practices to Lessen Modernization Risks: Report to the Chairman, Committee on Oversight and Government Reform, House of Representatives. (Paperback)

By U S Government Accountability Office

Createspace Independent Publishing Platform, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. The Food and Drug Administration (FDA), an agency within the Department of Health and Human Services (HHS), relies heavily on information technology (IT) to carry out its mission of ensuring the safety and effectiveness of regulated consumer products. Specifically, IT systems are critical to FDA s product review, adverse event reporting, and compliance activities. Recognizing limitations in its IT capabilities, the agency has undertaken various initiatives to modernize its systems. GAO was asked to (1) assess FDA s current portfolio of IT systems, including the number of systems in use and under development, and their purpose and costs; (2) assess the status and effectiveness of FDA s efforts to modernize the mission-critical systems that support its regulatory programs; and (3) examine the agency s progress in effectively integrating and sharing data among key systems. To do this, GAO reviewed information on key FDA systems and interviewed agency officials to determine the status of systems and the effectiveness of key IT management practices, as well as data sharing among key systems.
