By -

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 34 pages. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1983 Excerpt: . . . monazite crystals as much as 1 cm across in tin veins at Llallagua, Bolivia, contain no Th or Eu but, like the low-Thhigh Eu monazite from Malaysia, are associated with cassiterite (Gordon, 1939, 1944). A monazite from Belorussia, U. S. S. R. , contains 0. 11 percent Th02, has about 0. 07 percent Eu203, is pale greenish yellow, and is thought to be of metasedimentary origin (Serdyuchenko and others, 1967). Six pinkish-yellow monazites from the southern Urals have no Th02 and about 0. 1-0. 5 percent Eu203, and six yellow monazites from the Pamir Range contain about 1. 8-3. 6 percent Th02 and 0. 1-0. 4 percent Eu203 (Komov and others, 1974). A pneumatolytic white to red and brown-red monazite in the northern Caucasus contains about 2. 39 percent Th02 and 0. 06 percent Eu203 (Ploshko, 1961). Earthy monazite from a vein in carbonatite at Magnet Cove, Ark. , U. S....
